

# Styling parts that make your truck look great!

## WEDGE XL

- Improved aerodynamics
- Easy mounting
- Two sizes
- Several versions

White

Part number: See page 2

Fits all **Scania Next Generation** (L, P, G, R, S, XT-series)

**With our multi-functional Wedges, the truck gets a much more stylish look also a more streamlined design. With better aerodynamics, you save both fuel costs and the environment.**

The Wedges are available in two sizes, Large and XL, and both models can be ordered with or without lights and with lights we offer different options, see table below. The Wedges are also designed for different axle configurations\* and are suitable for most truck manufacturers' original mudwings, but also the wheelhouse radius of Parloc, Istoflex and Domar and more.

The Wedge can easily be matched with the rest of your truck since it's well suited for both paint and wrap. The material is also easily modified if you want to make changes for lights other than we offer.

### ✖ Easy mounting

Mounting is easily done with four screws through the Wedge and the wheelhouse. The Wedge is designed to be lightweight, about 250g. The procedure is minimal, and the rigidity of the wheelhouse remains the same after mounting.

\*Even if the radius fits the wheelhouse of your truck, always make sure that the space between the wheelhouses are big enough to fit the product. Measurements can be found below.
